PLUS Search Results for S/N 10024118, Searched February 28, 2005

The Patent Linguistics Utility System (PLUS) is a USPTO automated search
system for U.S. Patents from 1971 to the present. PLUS is a
query-by-example search system which produces a list of patents that are
most closely related linguistically to the application searched. This
search was prepared by the staff of the Scientific and Technical
Information Center, SIRA.

Oracle Works to Make Building e-Commerce Portals Easier   [Web Site Tools]

Posted on Wed Sep 22, 1999 - 10:18 pm PT Source [Direct URL]

Jumping deeper into a fast-crowding pool of Web portal creation offerings, Oracle this week updated its WebDB tool and FastForward Web Store products while introducing the FastForward DistributionRPM family to help companies manage content and build commerce sites. Using the new browser-based WebDB 2.2, developers should be better able to stitch together portlet components and aggregate different types of content for a consistent view and experience from end-viewers. The newest WebDB release is also meant to obviate the Webmaster bottleneck by giving more users the ability to publish and access information from their browsers. The newest version of WebDB, announced Wednesday, comes with a set of pre-built site templates, including organizational charts, stock feeds, and travel services. The tool and templates also allow for customized views of the content based on the end-user's interests and access privileges, providing personalized slices of applications.
